

Keep Cracking at Bay.

eScrub® REJUVENATING
SCRUB SEAL

eScrub strengthens your road and extends its service life by sealing mass cracks. A mechanized scrub broom follows the application of this rejuvenating scrub seal emulsion, forcing it deeper into the voids and cracks to ensure a longer lasting seal.

Get rid of cracks with the stroke of a broom.

More Durability at a Reduced Cost.

eScrub is a polymer-modified emulsion containing a rejuvenating agent that increases pavement quality and durability. Now, severe road distresses that previously required expensive mill and fill treatments can be corrected for less than half the cost.

Repairs Distress

Efficiently corrects pavements exhibiting a variety of issues such as fatigue cracking, block cracking, loss of friction, oxidation and raveling.

Enhances Durability

Renews surface friction, protects roads from continued deterioration and extends the life of older pavements for six to seven years.

Reduces Cost

Corrects severely distressed pavements at less than half the cost of a mill and fill.

Multiple Uses

eScrub can be used as a stress-absorbing interlayer or the first course of a cape seal.

eScrub is applied via a distributor truck with an attached broom sled or broom box, which scrubs the product into cracks to ensure they are properly remove filled, protecting the integrity of the road for years to come.

“Scrub sealing with eScrub is an economical and effective preservation treatment for extending pavement service life.”
